

BASIX CLASSIFICATION

CONCRETE RANGE

The Building Sustainability Index (BASIX) is implemented under the Environmental Planning and Assessment Act. BASIX reduces water and energy consumption.

BASIX classifies colours into light, medium and dark on the basis of their solar absorptance. Light coloured roof tiles keep cooler than darker coloured roof tiles and this cooler temperature can mean reduced energy costs for cooling a building.

BASIX LEVELS

LIGHT	< 0.475	● ○ ○
MEDIUM	0.475 - 0.70	● ● ○
DARK	0.70 - 1.0	● ● ●
